OpenInfra Community Dashboards

Overview of the OpenInfra and Bitergia Partnership

by Georg Link

OpenInfra Days Mexico 2022

OpenInfra and Bitergia partner in providing metrics to OpenInfra projects

About OpenInfra

With over 100,000 members in 187 countries, the OpenInfra Foundation helps open source communities build the tools infrastructure operators need for Data Center Clouds, 5G, Edge, Containers, CI/CD, and beyond.

About OpenInfra

OpenInfra has an opinionated way of supporting open source projects with the guidance of the **“Four Opens”:** *Open Source*, *Development*, *Design*, and *Community* and believes metrics are a key success factor. As well Bitergia is a trusted metrics partner that is already known and used by OpenInfra members.

About Bitergia

Bitergia helps companies improve their software development projects by providing tools and knowledge to improve decision making. It specializes in analyzing software development projects and its core platform is 100% open source.

The Bitergia team has been working with a wide variety of companies and organizations that had a need for actionable insights and better understanding of software development community and processes.

“Bitergia is the internationally-recognized team of experts in open source metrics. It really makes sense for the OpenInfra Foundation to partner more closely with them as we look towards supporting the next decade of open infrastructure projects. Through this partnership, all OpenInfra projects will have access to pertinent and standard community metrics and insights.”

– Thierry Carrez, GM of the OpenInfra Foundation

“OpenInfra has been long-standing partner. We have been working together on project sustainability and diversity equity and inclusion. I’m super excited that we will work more closely with OpenInfra it grows its projects and foundation.”

– Georg Link, Director of Sales at Bitergia

The Partnership

OpenInfra and Bitergia Partnership

Background

Long-standing relationship

Dashboards and DEI reports

Shared passion for the Four Opens

OpenInfra and Bitergia Partnership

Vision

Community metrics and insights for

All OpenInfra projects

OpenInfra and Bitergia Partnership

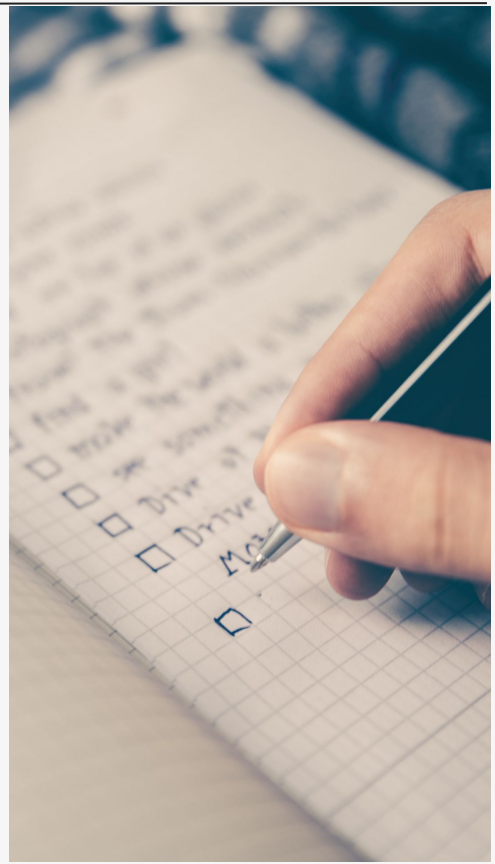
Goals

Meaningful community insights

Work together: metrics and domain knowledge

Sustainable communities

Data-driven decisions



Let’s take a look

How are these OpenInfra projects doing?

Dashboards Available Today!

Zuul

CI/CD platform for gating changes across multiple systems/repos.

https://zuul.biterg.io/

StarlingX

Edge cloud computing infrastructure for high performance, ultra-low latency applications.

https://starlingx.biterg.io/

Kata Containers

Secure, lightweight CRI compatible virtualized containers.

https://katacontainers.biterg.io/

But wait, there is more...

More metrics

What are you interested in?

- DEI survey and analysis
- Metrics trainings
- Custom dashboard development
- Annual report
- Fairness, transparency, and openness analysis
- Anything else...
